EDUCATION

University of North Carolina at Charlotte

August 2021 – May 2025

Bachelor of Science in Computer Science, Concentration in AI and Robotics

Charlotte, NC

- Relevant Coursework: Data Structures, Software Engineering, Calculus 2, Machine Learning, Natural Language Processing, Intelligent Robotics, Operating Systems

EXPERIENCE

Lead Backend Development Intern

August 2025 - Present

Hawl Technologies, LLC

- Led a backend team of 3 developers to **build scalable API services** for an AI-powered Chrome extension
- Collaborated directly with CEO to design and deploy core product features, providing technical insights that influenced company roadmap
- Created and tracked technical tasks, milestones, and team responsibilities to **keep development velocity consistent**
- Integrated **Stripe Checkout** with **secure session handling** and webhook infrastructure, enabling real-time payments
- Developed secure session handling using cookies to enable consistent user data retention
- Developed and maintained **Python-based backend services** for **user-authentication**, **payment workflows**, and selective data export
- Built a **cloud storage system** for persistent LLM “memories” using **Supabase** and **PostgreSQL**, designing schemas and integrations to enable scalable, persistent data management.
- **Collaborated** with frontend and data engineers to **align requirements** and **improve extension-to-backend communication**
- **Debugged and tested** backend services to **ensure full-functionality** and secure handling of sensitive data
- Developed an end-to-end feature-tour mode with **dynamic spotlighting** to guide users through **key product features**, including memory creation, tab architecture and export functionality
- Eliminated redundant cache writes in API endpoints, **improving API response time** (validated via **Postman** testing)

PROJECTS

BestScrape - Full-Stack Web-Scraping Application

May 2025

Python | JavaScript | Flask | Selenium | React.js | Chart.js | EmailJS

- Developed a **Full-Stack Web Application** that automates BestBuy product scraping using keyword-based searches (e.g., “Laptops”, “Phones”, “TVs”)
- Data retrieval with fetch request using **MongoDB’s PyMongo** and **Flask** to display product information and prices straight to the user
- Utilized **Chart.JS** to create price trend charts for each product, ensuring **data visualization**
- Deployed API backend and React frontend using **Render** for live production use

Facial-Recognition Timecard System

March 2025

Facial Recognition | Streamlit | Python | OpenCV | SQLite

- Developed a Full-Stack Streamlit-based timecard system with login/signup authentication
- Integrated **facial recognition** for secure clock-in/out verification using **OpenCV**
- Designed a schedule management feature supporting **CSV uploads** and manual input
- Built a user database to store names, hashed passwords, and facial images.
- Built a shifts database to store the names, shift date, start time, and end time of each shift
- Utilized **Pandas** to store and display shifts
- Ensured **data security** by **verifying user identity** before logging attendance

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS, Java

Libraries & Frameworks: React.js, Node.js, Flask, REST APIs, Pandas, NumPy, Streamlit, EmailJS, Chart.js, Selenium, Stripe, OpenCV

Developer Tools: Git, GitHub, VSCode, CLI, Postman

Databases: MongoDB, PostgreSQL, Supabase
